

IN THE CLAIMS:

The claims were amended as follows:

1. (Currently Amended) A head mounted virtual image display unit, the unit comprising:  
a microdisplay;  
an optical system for directing an image signal for viewing by a user, the image signal being generated in accordance with the microdisplay;  
an optical system mounting structure for supporting the optical system within the field of view of an eye of the user;  
a housing to substantially contain at least the optical system; and  
a light shield, ~~the light shield being~~ integrated with the housing and having an open position and a closed position, wherein the light shield is positioned with respect to the optical system such that, in ~~an~~ the open position, the image signal is viewed by the user with background light entering the optical system, and in ~~a~~ the closed position, the image signal is viewed by the user with background light at least partially blocked from entering the optical system.
2. (Original) The head mounted virtual image display unit of claim 1, wherein the light shield is slidably integrated in the optical system housing such that the light shield may be slid between the open position and the closed position.
3. (Original) The head mounted virtual image display unit of claim 1, wherein the light shield is one of opaque, partially opaque, colored and polarized.
